FUZIONVIEW ONBOARDING STEPS

Smart. Simple. Secure.

INTRODUCTION

Welcome to FuzionView

Thank you for your interest in FuzionView. This document provides general information about steps an organization will need to take to become a user of an 811 service that has been enabled with FuzionView visualization capabilities.

ABOUT

The concept for FuzionView was developed by a collaborative public-private think-tank led by Gopher State One Call (GSOC), the nonprofit, statewide utility notification center for design engineers, locators and excavators in Minnesota.

GSOC subsequently awarded a contract to develop the FuzionView software to SharedGeo, a Minnesota-based geospatial research and development nonprofit with the mission of supporting the common good.

The onboarding process as described in the next sections provides the steps for the GSOC system. Steps for other 811 system providers will typically be similar.

ONBOARDING PROCESS

Facility Operator

The steps below assume an appropriately authorized individual in an organization has:

1) Reviewed the FuzionView website and available information items, and
2) A middle-management decision has been made to contact the 811 service provider to learn more about potentially becoming a facility operator data provider.

- During the initial call, the 811 service will review onboarding procedures and answer any questions the facility operator might have.
- If the decision is then made to expand the discussion, arrangements will be made for a representative of the 811 service to brief the facility operator's respective key decision makers.
- If the decision makers decide to explore participation further, the facility operator legal department will be provided with a standard system user agreement for their review and tentative approval.

FUZIONVIEW ONBOARDING STEPS

Smart. Simple. Secure.

ONBOARDING PROCESS

- As appropriate for circumstances as described above, the facility operator will designate a primary IT/geospatial point of contact to work with the 811 service.
- The organizational contact will be assigned a FuzionView test account that can be used for evaluation.
- Based on the evaluation and internal discussion at the facility operator, the facility operator makes a decision about becoming a data provider. In the event the decision is made to proceed:
  - The required legal agreements are signed and submitted by the facility operator.
  - The facility operator IT/GIS team and 811 service work together to establish a connection.

ONBOARDING PROCESS

Locator and Excavator

If decision makers at a locator or excavator organization decides their organization wants to use the system, the 811 service will provide a standard system user agreement for signature. Account creation and use will be like that as described above for the facility operator.
