ENCRYPTION & DATA PROTECTION

FuzionView Uses AES-128

AES-128 is the encryption standard that the National Security Agency selected for use by the U.S. Federal government for classified documents.

FuzionView is Normally Deployed in Call Center

Because FuzionView is normally integrated directly into a call center's software, a hacker would first need to hack call center protective systems before even getting to FuzionView.

FuzionView Has Undergone a Rigorous Security Review

As performed by a Certified Third-Party Assessment Organization (C3PAO) authorized to perform CMMC Level 2 assessments for DoD contractors, FuzionView is in compliance with all applicable federal software security standards.

FuzionView Doesn't Violate Any Data Protection

An extensive review of federal and industry documents by experts has determined that the FuzionView approach doesn't violate the intent or spirit of any geospatial data laws or regulations.

FuzionView Exceeds Federal Data Security Standards

By using a multifaceted approach to data security, FuzionView provides greater protection for infrastructure data than the federal government's own "Gold Standard" geospatial data program, HIFLD Gold. More exactly, it is an approach which exceeds the For Official Use Only (FOUO) classification.

ACCESS CONTROL

The Facility Operator Always Controls Who Sees What

The 811 ticket information available to any specific individual is determined by permissions set by respective facility operators, who can also completely disconnect their systems from FuzionView with nothing more than a single mouse click.

Data is Viewable, NOT SHARED!

Infrastructure data as shown in FuzionView is a shared visualization of where utilities are located. FuzionView does not make the actual data sets available for download!

SECURITY

Smart. Simple. Secure.

ACCESS LIMITATIONS

Dig-Site Constraints

The FuzionView system delivers visualization using the polygon of the dig-site plus a 100' buffer – a ticket requestor cannot "surf" the system looking for utility information outside of that polygon.

Temporal Restrictions

The view of data within the boundary is only available for the life of the ticket, which in most cases is 14 days. This is far shorter than markings may exist on the ground.

USER AUTHENTICATION

Authorized Access Only

Only registered users, authorized by a written agreement with the 811 center, are given permission to use the system.

Active Monitoring

FuzionView has been built to leverage automated 811 systems which detect system abuse - violators will be quickly removed and denied further access.
